

INDEX

- Activity of animals, 269-307
 amphibians, 295
 birds, 295
 carnivores, 297
 invertebrates, 296
 mammals, 294
 reptiles, 296
- Algae, salt marsh, 199-211
 colonization, 214
 penetration, 215
 productivity, pigment analysis, 215
 growth, 217
- Alpine plants, solar ultraviolet radiation as ecological factor, 243-268
 adaptation to radiation, 259
 exclusion of radiation, 254
 plant responses, 253
- Alpine regions of Montana, vegetation and soils, 127-167
- Amphibians, activity, 295
- Bamberg, Samuel A., article, 127-167
- Bider, J. Roger, article, 269-307
- Birds, activity, 295
- Blue Ridge, vegetation gradients, 309-343
- Blum, John L., article, 199-221
- Calcareous parent materials, vegetation, soils associated with, 127-167
 three alpine regions of Montana, 127-167
- Caldwell, Martyn M., article, 243-268
- Caloric value, tree squirrel food, 50
- Cape Breton Lakes, stratigraphy, 111
 Salmon River Lake, 111
 Upper Gillies Lake, 114
 McDougal Lake, 116
- Carnivores, activity, 297
- Cladocera, developmental history, microfossils, 223-241
 tuberculate forms, 232
- Community structure, Cone Spring, 188
 relative abundance, 190
 spatial distribution, 188
 species diversity, 189
- Cone Spring, structure and dynamics, 169-197
 community structure, 188-192
 energy flow, 184-188
 fauna, 177-184
 flora, 173-177
 structure, 188-192
- Daniel, Charles P., article, 1-29
- Density, upland forest
 basal area per acre, 68-73
 diameter, average, 71-73
 size, average, 68-71
 Dispersal activity, 300
- Ecological genetics, *Tribolium*, 345-378
- Ecosystem analysis, spring, 169-195
- Energy flow, Cone Spring, 184-187
 efficiencies, 187
 respiration, community, 185
- Energy requirements, tree squirrels, 46-50
- Fecundity, *Tribolium*, 350
- Flint Creek Range, Montana, vegetation stand types, 146
- Folly Bog, stratigraphy, 103
- Gene frequencies, *Tribolium*, 351
- Georgia, Dawson County, old field succession, effects of ionizing radiation, 1-29
- Glacial section, late, 225-227
 post, 227-230
- Goff, F. Glenn, article, 65-86
- Gradient analysis, structural, upland forests of western Great Lakes area, 65-86
- Great Lakes, western area, structural gradient analysis, upland forests, 65-86
- Growth rates, trees, 322
- Halifax County Lakes, stratigraphy, Silver Lake, 106
 Bluff Lake, 109*
- Harmsworth, Rodney V., article, 223-241
- Harriman Lake, stratigraphy, 99
- Hybrid populations, *Tribolium*, 345-378
- Importance value, vegetation of Blue Ridge, 333
- Invertebrates, activity, 296
- Ionizing radiation, effects on old field succession, 1-29
- Livingstone, D. A., article, 87-125
- Major, Jack, article, 127-167
- Mammals, activity, 294
- Microclimate, vegetation of Blue Ridge, 323
- Microfossils, animals of Belham-tarn, 223-241
 Cladocera, 231-232
 midges, 234
 Neorhabdocoelae, 232
- Midges, microfossils, 234
- Migration activity, 299
- Models, selection in *Tribolium*, 372
- Montana, alpine regions of, vegetation and soils, 127-167
 Big Snowy Range, 142
 Siyeh Pass, Glacier National Park, 145
 Flint Creek Range, 146
- Mowbray, Thomas B., article, 309-343
- Neorhabdocoelae, microfossils, 232
- Net production, Cone Spring, 176
 fauna, 176-177
 flora, 177-184
- Old field succession, 1-29
 composition, 8-11
 irradiated field succession, 13-20
 microenvironment, 4-8
 natural succession, 11-13
 radiation effects, 11
 standing crop, 20-23
- Oosting, Henry J., article, 309-343
- Peat bog, England, 223-239
 glacial history, 223-239
- Phenology, animal activity, 290
 vegetation, 309-343
- Platt, Robert B., article, 1-29
- Pollen diagrams, interstadial and postglacial, 87-125
- Population biology, *Tribolium*, selection, 347-378
- Population genetics, *Tribolium*, 345-378
- Population growth on activity, 290
- Population size, adult, *Tribolium*, 347
- Radiation, ionizing, effects on old field succession, 1-29
- Radiation, solar ultraviolet, ecological factor for alpine plants, 243-268
- Regulation of population, *Tribolium*, 376
- Reproduction activity, 299
- Reptiles, activity, 296
- Salt marsh, algae, 199-211
Spartina, 199-211
- Sand transect technique, 275-279
- Selection experiments with *Tribolium*, 345-378
- Siyeh Pass, Glacier National Park,

- Montana, vegetation stand types, 145
- Smith, Christopher C., article, 31-63
- Soil moisture, Blue Ridge vegetation, 328
- Sokal, Robert R., article, 345-378
- Solar ultraviolet radiation, ecological factor, alpine plants, 243-268
- Sonleitner, Frank J., article, 345-378
- Spartina*, salt marsh, 199-221
- algae associate, 199-221
- mat function, 217-219
- Spatial utilization, by animals, 281-286
- in fields, 284
- in woods, 281
- Species diversity,
- Cone Spring, 189
- upland forest, 73-74
- Stratigraphy,
- Cape Breton Lakes, 111
- Folly Bog, 103
- Halifax County Lakes, 106
- Harriman Lake, 99
- Hillsborough interstadial, 95
- Structural gradient analysis, upland forests, western Great Lakes area, 65-86
- Structural spectrum,
- boreal transition forests, 80
- northern upland tree species, 76
- southern upland tree species, 78
- Succession, old field, effects of short term ionizing radiation, 1-29
- Tamiasciurus*, social organization, 31-63
- breeding behavior, 37-38
- energy budget, 46-53
- energy supply, 53-58
- parental care, 39-43
- territoriality, 33-37
- time budget, 43-46
- Tidal relations, salt marsh, 201-202
- Tilly, Laurence J., article, 169-197
- Tree squirrels, 31-62
- breeding behavior, 38
- copulation, 38
- juvenile behavior, 38
- parental care, 38
- territory, 33-36
- Tribolium castaneum*,
- adult population, 347
- development, 351
- fecundity, 350
- gene frequencies, 355
- survival, 349
- Ultraviolet radiation, solar, ecological factor for alpine plants, 243-268
- biological considerations in analysis, 247
- cloud pattern and UV climate, 252
- conditions of measurement, 249
- physical considerations in analysis, 247
- radiation measurement, 245
- Upland forests, structural gradient analysis of, in western Great Lakes area, 65-86
- Vegetation gradients, 309-343
- Weather, effects on animal activity, 300
- Zedler, Paul H., article, 65-86
